

Harshal Sawant

SOFTWARE ENGINEER

Mumbai, India

+91 88281 66801 | harshalsawant.dev@gmail.com | c0d3h01.tech | github.com/c0d3h01 | linkedin.com/in/haarshalsawant

Product-focused software engineer with 7+ years of experience building backend systems, developer tools, and cloud services. Strong track record of shipping reliable features, improving performance, and mentoring teams.

Experience

Northstar Labs, Senior Software Engineer | Austin, TX

May 2023 - Present

- Led migration of core APIs from a monolith to services, reducing average response time by 38%.
- Designed event-driven workflows with Kafka and Redis for billing and notifications at scale.
- Introduced CI quality gates and integration tests, reducing production rollback frequency by 45%.

Bluewave Commerce, Software Engineer | Remote

Jan 2021 - Apr 2023

- Built order management features used by 120k+ monthly users across web and mobile clients.
- Delivered internal admin tooling that cut manual support tasks by 12 hours per week.
- Partnered with product and design to ship 20+ roadmap features with predictable release cadence.

Harbor Data Systems, Junior Backend Engineer | Denver, CO

Jun 2018 - Dec 2020

- Implemented REST APIs and SQL reporting endpoints for operations dashboards.
- Improved test coverage from 42% to 71% across critical backend modules.
- Automated deployment checks with GitHub Actions to reduce release defects.

Education

Bachelor of Computer Applications · Tilak Maharashtra Vidyapeeth (TMV) · Pune, India | CGPA: 7.5/10

2024 - 2027

Skills

Languages TypeScript, JavaScript, Python, Go, Rust, C++, Java, SQL
Frontend React, Next.js
Backend Node.js, Express, FastAPI, Django, REST APIs, gRPC, Microservices
Cloud AWS (EC2, ECS, Lambda, S3, RDS), Docker, Kubernetes, Terraform
Data & Tools PostgreSQL, Redis, MongoDB, GitHub Actions, Grafana, Prometheus

Projects

androidtweaker - Shell, Android, Linux tooling

 [Github](#)

Android Device Performance Toolkit

2024 - Present

- Built and maintained a shell-driven Android optimization toolkit focused on runtime tuning for rooted devices.
- Structured tweak workflows for repeatable deployment and simpler long-term maintenance.

coretaskoptimizer - C++, CMake, Shell, Linux syscalls, Magisk/KernelSU/APatch

 [Github](#)

Native Android Task Scheduling Module

2024 - Present

- Implemented a native C++ root module that applies CPU affinity, scheduler policy, and I/O priority to critical system tasks.
- Targeted Magisk, KernelSU, and APatch with low-overhead boot-time optimization and detailed execution logs.

firuslab/obfussor - Svelte, TypeScript, Tauri, Rust, LLVM

 [Github](#)  [Demo](#)

Cross-Platform C/C++ Obfuscation Suite

2025 - Present

- Contributed to an LLVM-based obfuscation platform that hardens C/C++ binaries using layered code transformations.
- Worked on the Svelte + Tauri application flow for running obfuscation jobs and reviewing protection metrics.

nix-dotfiles - Nix, Nix Flakes, Home Manager, Disko, sops-nix

 [Github](#)

Reproducible NixOS Workstation Stack

2025 - Present

- Engineered a flake-driven NixOS + Home Manager setup with modular host profiles for consistent developer environments.
- Integrated Disko provisioning and sops-nix secret management for secure, automated workstation bootstrap.

Highlights

Open Source Contributor

Holopin: [@c0d3h01](#)

Hacktoberfest 2025

October 2025

- Completed Hacktoberfest 2025 with accepted pull requests merged into active open-source projects.
- Delivered production-quality code contributions including bug fixes, feature enhancements, and performance-focused refactors.
